

FUNCTION

The PWK06020W is a normally closed, direct-acting, spring-loaded proportional flow control valve. It is non-compensated and its function is to control the flow from port 1 to port 2 smoothly.

The energization of the coil reduces or increases an orifice cross-section and thus controls the flow.

Together with a pressure compensator the proportional flow control valve can be used as a 2-way flow regulator – for example when required to lift/lower variable loads at the same velocity.
